The Next Generation of Wealth Advisory

Make advisors more human – with AI.

SwissHacks 19th – 21st June 2026

Today, hyper-personalised advice is reserved for the few.

The best Relationship Managers know their UHNWI clients inside out

Values, life events and business context shape every proposal. But this level of care requires more time than any Relationship Manager (RM) has at scale.

It does not scale past a handful of clients

Tailoring proposals to each client's full personal context, monitoring news for every holding and drafting individual narratives takes more time than any RM has.

AI changes the equation

Your dashboard gives every client the same proactive, hyper-personalised care. 24/7. The RM stays in the loop and the client always decides.

Same Strategy. Personal Asset Selection.

With AI the strategy stays. What changes is how each asset slot is filled -- and how often.

Today

Strategy-Guided. Reviewed Quarterly.

Client picks a strategy (Balanced, Growth, Defensive) set by the bank's CIO

Can state broad preferences: exclude a sector, apply an ESG tilt

If the portfolio drifts outside the strategy or an asset leaves the CIO list, the RM proposes a change -- typically at quarterly reviews

Personal context rarely drives individual asset selection

Result: Strategy-correct. Quarterly. Not personal at asset level.

With your dashboard

Same Strategy. Personal. 24/7.

Client stays in their chosen strategy. AI handles the rest.

How? See next slide.

Result: Strategy-correct. Personal. Always on.

Four Capabilities Your Dashboard Needs to Deliver

Strategy stays unchanged. Personalisation happens at asset level.

Build the Client DNA

AI reads all raw CRM conversation logs and maps each client's personal profile: values, business interests, family context, individual preferences -- automatically, without manual data entry.

Monitor Global News 24/7

News that is relevant to a client's holdings or personal profile is flagged the moment it breaks: a pharma pivot, a governance scandal, a sustainability milestone.

Suggest Personal Asset Swaps Within the Strategy

Within the client's existing strategy, AI identifies current holdings that conflict with their DNA and proposes sector-matching replacements. Additionally, it uncovers new, unheld investment opportunities that align seamlessly with the client's personal preferences.

Personalise the Advisory Message

Every proposal comes with a draft message for the RM, written in the client's preferred style: analytical and data-driven for one, purpose-led and inspiring for another.

Build the Next-Gen Advisor Dashboard in 48 Hours

Bridge client portfolios, CRM intelligence and news. Make it simple for the Relationship Manager.

1

Read and Interpret CRM Notes

Parse raw conversation logs and build each client's investment identity: values, business context and personal priorities.

2

Connect to Portfolio and News

Link the client profile to their current holdings and a news feed.

3

Surface Relevant Alerts

Match each client's profile against portfolio and incoming news to flag potential conflicts or opportunities.

Simulated events work perfectly for the hackathon.

4

Generate a Tailored Message

Draft the RM's advisory note in the client's preferred style: data-driven and precise, or values-led and inspiring.

Human in the loop

AI equips the Relationship Manager with insights and draft proposals. It never advises the client directly. The RM recommends, the client always decides and places the orders.

Real Impact. Real Tech. Real Story.

Technically thrilling and humanly meaningful

\$150T+

Global Wealth Under Management

One of the world's largest industries.
Your solution addresses a real gap at
real scale.

48h

To Build a Working MVP

Defined scope, sample data included
and clear APIs. Achievable in a
hackathon and impressive in a portfolio.

Open

Creative Scope

Use the provided personas and data as
a starting point, design your own, or
mix both. Push the system as far as
your imagination allows.

Purpose beyond the hackathon: build technology that makes advisors more human, not less.

The Next Generation of Wealth Advisory

Use Case Deep-Dive

20-minute session for teams who chose this use case

- Your Mission -- recap
- A Multi-Agent Approach -- one way to build this
- The Four Client Personas -- who you are building for
- Your Data Package -- what is ready for you on Day 1
- Tech Environment -- the stack available to you
- Q&A

Build the Next-Gen Advisor Dashboard in 48 Hours

Bridge client portfolios, CRM intelligence and news. Make it simple for the Relationship Manager.

1

Read and Interpret CRM Notes

Parse raw conversation logs and build each client's investment identity: values, business context and personal priorities.

2

Connect to Portfolio and News

Link the client profile to their current holdings and a news feed.

3

Surface Relevant Alerts

Match each client's profile against portfolio and incoming news to flag potential conflicts or opportunities.

Simulated events work perfectly for the hackathon.

4

Generate a Tailored Message

Draft the RM's advisory note in the client's preferred style: data-driven and precise, or values-led and inspiring.

Human in the loop

AI equips the Relationship Manager with insights and draft proposals. It never advises the client directly. The RM recommends, the client always decides and places the orders.

A Multi-Agent Approach: One Possible Architecture

Each agent owns one domain. The orchestrator coordinates and routes.

The Personal Connection

Emotional and Purpose-Driven

BACKGROUND

A wealthy client (Hubertus and Carmen Schneider) whose child was recently diagnosed with a severe chronic illness. The family has dedicated significant personal resources and a foundation to supporting medical research in this specific therapeutic field.

CLIENT PREFERENCE

Wants to actively support innovation in this medical sector and avoid holdings in pharma companies that have frozen research in this area.

TRIGGER EVENT

A pharmaceutical company in the portfolio announces a corporate restructuring, shutting down its entire research division for this chronic disease to focus on more profitable lifestyle drugs.

WHAT THE AI NEEDS TO DO

Read CRM logs to identify the client's deep personal alignment with this specific research field

Detect that the recommended rebalancing from the CIO view directly conflicts with this personal mandate

Suggest a replacement from the CIO recommendation list within the same sector

Draft an empathetic narrative for the RM tailored to the client's emotional context

DATA

CRM Data: Document SwissHacks CRM; Tab Schneider

Portfolio Strategy: Document SwissHacks Portfolio Construction final; Tab Portfolio Strategy shows you the asset allocation use balanced

Portfolio: Document SwissHacks Portfolio Construction final; Tab Sample Portfolio Balanced
Historical Transactions: Document SwissHacks Portfolio Construction final; Tab Transactions Balanced

Historical Cash Flows: Document SwissHacks Portfolio Construction final; Tab Cash Flows (filter the cash flows depending on your portfolio strategy)

The Purpose-Driven Investor

Inspirational and Values-Led

BACKGROUND

Elena Huber -- a high-net-worth environmentalist who actively finances reforestation projects in South America. Elena and Marius Huber hold the bank's Defensive mandate, whose equity sleeve is tilted toward global consumer staples

CLIENT PREFERENCE

Wants to overweight companies with exceptional sustainability leadership. Wants the RM to call when companies she owns do something magnificent -- not just when stocks drop.

TRIGGER EVENT

A major consumer goods company announces a historic policy: cutting off all suppliers tied to palm oil deforestation and launching a multi-million dollar reforestation foundation in Brazil.

WHAT THE AI NEEDS TO DO

Parse casual CRM dialogue to uncover Elena's undocumented passion for rainforest preservation

Recognise the palm oil announcement as an authentic match with her values

Generate a 'Good News Briefing' and flag the stock as a buy recommendation if on the CIO list

Draft an inspirational narrative linking the market news to her life's work

DATA

CRM Data: Document SwissHacks CRM; Tab Huber

Portfolio Strategy: Document SwissHacks Portfolio Construction final; Tab Portfolio Strategy shows you the asset allocation use defensive

Portfolio: Document SwissHacks Portfolio Construction final; Tab Sample Portfolio Defensive
Historical Transactions: Document SwissHacks Portfolio Construction final; Tab Transactions Defensive

Historical Cash Flows: Document SwissHacks Portfolio Construction final; Tab Cash Flows (filter the cash flows depending on your portfolio strategy)

The Defensive Value Investor

Safety-Oriented and Reassuring

BACKGROUND

Lisa and Eugen Raeber -- an older conservative Swiss couple who built their wealth in traditional precision engineering. Deep scepticism of abstract business models and US tech bubbles.

CLIENT PREFERENCE

Psychological safety through stable, asset-heavy corporations with resilient dividend histories. Deeply uncomfortable with high-flying tech positions.

TRIGGER EVENT

The model portfolio suggests aggressive rebalancing: slashing stable dividend-paying blue chips (Nestle, Novartis) to fund positions in US AI stocks (Nvidia, Microsoft).

WHAT THE AI NEEDS TO DO

Parse CRM conversations to isolate their aversion to US tech and need for tangible dividends

Flag that the proposed rebalancing violates their psychological comfort zone

Find a compromise: European industrial giants investing in automation -- familiar packaging

Draft a step-by-step reassuring narrative emphasising capital preservation

DATA

CRM Data: Document SwissHacks CRM; Tab Raeber

Portfolio Strategy: Document SwissHacks Portfolio Construction final; Tab Portfolio Strategy shows you the asset allocation use defensive

Portfolio: Document SwissHacks Portfolio Construction final; Tab Sample Portfolio Defensive
Historical Transactions: Document SwissHacks Portfolio Construction final; Tab Transactions Defensive

Historical Cash Flows: Document SwissHacks Portfolio Construction final; Tab Cash Flows (filter the cash flows depending on your portfolio strategy)

The Corporate Reputation Case

Analytical and Risk-Focused

BACKGROUND

Julian Ammann, a prominent Swiss entrepreneur who owns a well-known national retail and consumer goods brand. His high public profile means any portfolio controversy could directly damage his own brand.

CLIENT PREFERENCE

Cannot hold shares in companies facing major public backlash on corporate governance or unethical labour practices. Reputational risk equals financial risk.

TRIGGER EVENT

A major consumer brand in his recommended portfolio is hit by an investigative scandal exposing systemic underpayment and exploitation of warehouse workers.

WHAT THE AI NEEDS TO DO

Parse CRM notes to extract his implicit sensitivity to public perception and brand contamination

Match the breaking governance scandal against this profile and flag as a reputational threat

Propose an immediate swap into a stable sector peer with clean governance at similar risk

Generate a professional briefing focusing on governance facts and substitution metrics

DATA

CRM Data: Document SwissHacks CRM; Tab Ammann

Portfolio Strategy: Document SwissHacks Portfolio Construction final; Tab Portfolio Strategy shows you the asset allocation use growth

Portfolio: Document SwissHacks Portfolio Construction final; Tab Sample Portfolio Growth

Historical Transactions: Document SwissHacks Portfolio Construction final; Tab Transactions Growth

Historical Cash Flows: Document SwissHacks Portfolio Construction final; Tab Cash Flows (filter the cash flows depending on your portfolio strategy)

Everything You Need Is Ready on Day 1

Data, APIs, financial market access and LLM credits. Focus on building.

4 Client Personas

Fictional client profiles with CRM conversation logs, portfolio holdings and transaction history. Ready to use or adapt.

SIX Financial Data

Access to asset data and current prices via the SIX Financial Information API. Real market data for your dashboard.

LLM API Credits

Credits for large language model APIs are included. No need to bring your own key.

Portfolio Data and Strategies

Each persona includes current holdings and transaction history, plus the bank's portfolio strategies and CIO recommendation list for asset swap suggestions.

Live News APIs

Event Registry API access provided. Yahoo Finance and Google News also work. Your choice of data pipeline.

Full Creative Freedom

Use the provided data or generate your own. Extend the dashboard, add personas, or explore directions we have not imagined.
